

Norkring België settles agreement with Telenet for renting digital broadcast frequencies

(Brussels – 18/2/2010) Norkring België has taken the next step in the selection procedure to let the digital broadcast frequencies through its broadcast infrastructure network in Belgium. Norkring België and Telenet have signed an agreement on this. Thanks to this agreement, Telenet becomes the first partner of Norkring België. The aim of Norkring België remains to let its network to more than one partner.

Through this, Telenet is given the opportunity to broadcast wireless television and radio broadcasts in Flanders and Brussels in digital quality ‘on the digital air’. Reception is possible by a small antenna in or next to your television or radio set.

About Norkring België

Norkring België is a network operator with its own broadcast network and broadcast licences for wireless digital television, digital radio and other digital applications in Flanders and Brussels. Since the 5th of March 2009, Norkring België is the administrator of the whole transmission park in Flanders and Brussels. At the end of June 2009, Norkring België also obtained the licences to offer a television and radio broadcast network and the accompanying digital frequency packages.
